

HELP MAKE STEROID CHECKING A REALITY!

We need help from the steroid community

Currently steroids are unable to be drug tested in any of the fixed sites around Australia and are being left behind in progressive harm reduction approaches

How can you help?

Bring your gear (Vials + Tablets)
To the CheQpoint drug checking service
In Brisbane from April - December 2024.
Check website for days and times.

Can I get results?

Approximately every 1-2 months all the results will be posted online via the Hi-Ground website and socials, however these results will **not** be individualised (for now).

What happens with my sample?

The samples received at CheqPoint are taken to another lab for off-site testing using specialised equipment that enables the steroid community to receive comprehensive results such as presence of other substances and purity.

Overtime we aim to refine this process so testing steroids becomes easier, faster and the community can receive individualised results.

What is this about?

This is a research project about how steroids can be included and integrated into the current drug checking processes.

The research project is also wanting to interview people who use steroids regarding their steroid use after they see the results posted.
